https://docs.microsoft.com/en-us/dynamics365/finance/general-ledger/intercompany-accounting-setup

NEW QUESTION: 2
What network virtualization technology can be leveraged within the data center to reduce the number of physical devices?
A. VSS
B. VDC
C. VLANs
D. VPLS
Answer: B

NEW QUESTION: 3
Your serverless architecture using AWS API Gateway, AWS Lambda, and AWS DynamoDB experienced a large increase in traffic to a sustained 3000 requests per second, and dramatically increased in failure rates.
Your requests, during normal operation, last 500 milliseconds on average. Your DynamoDB table did not exceed 50% of provisioned throughput, and Table primary keys are designed correctly. What is the most likely issue?
A. You did not request a limit increase on concurrent Lambda function executions.
B. Your API Gateway deployment is throttling your requests.
C. You used Consistent Read requests on DynamoDB and are experiencing semaphore lock.
D. Your AWS API Gateway Deployment is bottleneckingon request (deserialization.
Answer: A
Explanation:
Explanation
Every Lambda function is allocated with a fixed amount of specific resources regardless of the memory allocation, and each function is allocated with a fixed amount of code storage per function and per account.

By default, AWS Lambda limits the total concurrent executions across all functions within a given region to 1000.
For more information on Concurrent executions, please visit the below URL:
