Answer: B

Explanation:

Option A and B are invalid because mapping keys to services cannot be done via either the IAM or bucket policy. Option D is invalid because keys for IAM users cannot be assigned to services. This is mentioned in the AWS Documentation. The `kms:ViaService` condition key limits use of a customer-managed CMK to requests from particular AWS services. (AWS managed CMKs in your account, such as `aws/s3`, are always restricted to the AWS service that created them.) For example, you can use `kms:ViaService` to allow a user to use a customer managed CMK only for requests that Amazon S3 makes on their behalf. Or you can use it to deny the user permission to a CMK when a request on their behalf comes from AWS Lambda.

For more information on key policy's for KMS please visit the following URL:

<https://docs.aws.amazon.com/kms/latest/developereuide/policy-conditions.html> The correct answer is: Use the `kms:ViaService` condition in the Key policy. Submit your Feedback/Queries to our Experts
