Which of the following types of drivers will MOST likely ensure compatibility will all virtual workstations?

- A. The latest drivers from the vendor's website
- B. The drivers from the OS repository
- C. Legacy drivers
- D. Alternative community drivers

Answer: A

NEW QUESTION: 2

You have been hired as a project manager for Tech Perfect Inc. You are studying the documentation of planning of a project. The documentation states that there are twenty-five stakeholders with the project. What will be the number of communication channels for the project?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

According to the question, the project has twenty-five stakeholders. Communication channels are paths of communication with stakeholders in a project. The number of communication channels shows the complexity of a project's communication and can be derived through the formula shown below: Total Number of Communication Channels = $n(n-1)/2$ where, n is the number of stakeholders. Hence, a project having five stakeholders will have ten communication channels. Putting the value of the number of stakeholder in the formula will provide the number of communication channels: Number of communication channel = $(n(n-1)) / 2 = (25(25-1)) / 2 = (25 \times 24) / 2 = 600 / 2 = 300$

Who are project stakeholders? Project stakeholders are those entities within or without an organization, which: Sponsor a project or, Have an interest or a gain upon a successful completion of a project. Examples of project stakeholders include the customer, the user group, the project manager, the development team, the testers, etc. Stakeholders are anyone who has an interest in the project. Project stakeholders are individuals and organizations that are actively involved in the project, or whose interests may be affected as a result of project execution or project completion. They may also exert influence over the project's objectives and outcomes. The project management team must identify the stakeholders, determine their requirements and expectations, and, to the extent possible, manage their influence in relation to the requirements to ensure a successful project.

NEW QUESTION: 4

Which of the following is a declarative access control policy language implemented in XML and a processing model, describing how to interpret the policies?

- A. XACML
- B. SAML
- C. SOAP
- D. SPML

Answer: A

Explanation:

XACML stands for extensible Access Control Markup Language. It is a declarative access control policy language implemented in XML and a processing model, describing how to interpret the policies.

Latest version 2.0 was ratified by OASIS standards organization on 1 February 2005. The planned version 3.0 will add generic attribute categories for the evaluation context and policy delegation profile (administrative policy profile).

Answer option B is incorrect. SOAP, defined as Simple Object Access Protocol, is a protocol specification for exchanging structured information in the implementation of Web Services in computer networks, it relies on extensible Markup Language as its message format, and usually relies on other Application Layer protocols for message negotiation and transmission. SOAP can form the foundation layer of a web services protocol stack, providing a basic messaging framework upon which web services can be built.

Answer option C is incorrect. Service Provisioning Markup Language (SPML) is an XML-based framework developed by OASIS (Organization for the Advancement of Structured Information Standards). It is used to exchange user, resource and service provisioning information between cooperating organizations. SPML is the open standard for the integration and interoperation of service provisioning requests. It has a goal to allow organizations to securely and quickly set up user interfaces for Web applications and services, by letting enterprise platforms such as Web portals, application servers, and service centers produce provisioning requests within and across organizations.

SPML is the open standard for the integration and interoperation of service provisioning requests.
