#### **NEW QUESTION: 2**

Ann, a technician, is tasked with building a workstation that can host multiple virtual environments. Which of the following is the MOST important component for this type of build?

- A. Multiple CPU cores
- B. High-end cooling
- C. Dual monitors
- D. HTPC compact form factor
- E. Specialized audio and video cards

**Answer: A**

#### **NEW QUESTION: 3**

You have a server named Server1 that runs Windows Server 2012 R2.

You add an additional disk to Server1 as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that users can access the additional disk from drive C.

What should you do?

- A. Convert Disk 0 and Disk 1 to dynamic disks and extend a volume.
- B. Convert Disk 0 to a dynamic disk and add a mirror.
- C. Convert Disk 1 to a dynamic disk and create a spanned volume.
- D. Create a simple volume on Disk 1 and mount the volume to a folder.

**Answer: D**

#### **NEW QUESTION: 4**

You onboard 10 Azure virtual machines to Azure Automation State Configuration.

You need to use Azure Automation State Configuration to manage the ongoing consistency of the virtual machine configurations. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You

will receive credit for any of the correct orders you select.

**Answer:**

Explanation:

Explanation

Step 1: Upload a configuration to Azure Automation State Configuration.

Import the configuration into the Automation account.

Step 2: Compile a configuration into a node configuration.

A DSC configuration defining that state must be compiled into one or more node configurations (MOF document), and placed on the Automation DSC Pull Server.

Step 3: Assign the node configuration

Step 4: Check the compliance status of the node

Each time Azure Automation State Configuration performs a consistency check on a managed node, the node sends a status report back to the pull server. You can view these reports on the page for that node.

On the blade for an individual report, you can see the following status information for the corresponding consistency check:

The report status - whether the node is "Compliant", the configuration "Failed", or the node is "Not Compliant"
