Answer:
Explanation:

Explanation

Box 1: No
Azure DNS provides automatic registration of virtual machines
from a single virtual network that's linked to a private zone
as a registration virtual network. VM5 does not belong to the
registration virtual network though.
Box 2: No
Forward DNS resolution is supported across virtual networks
that are linked to the private zone as resolution virtual
networks. VM5 does belong to a resolution virtual network.
Box 3: Yes
VM6 belongs to registration virtual network, and an A (Host)
record exists for VM9 in the DNS zone.
By default, registration virtual networks also act as
resolution virtual networks, in the sense that DNS resolution
against the zone works from any of the virtual machines within
the registration virtual network.
