SQL> AUDIT POLICY ORA_DATABASE_PARAMETER BY SYS, SYSTEM;
```

- A. Option C
- B. Option E
- C. Option A
- D. Option B
- E. Option D

Answer: B,C

Explanation:

Explanation

* The ORA_DATABASE_PARAMETER policy audits commonly used Oracle Database parameter settings.

By default, this policy is not enabled.

NEW QUESTION: 2

Which two attributes describe key benefits of the InfiniBand network?

- A. All Exadata database servers have a direct path link to each Exadata Storage Server.
- B. Expanding from two Full racks to four only requires adding an external InfiniBand switch to be at the top of the fat-tree topology.
- C. Oracle's interconnect protocol uses direct memory access (DMA) to eliminate buffer copies and reduce CPU use.
- D. Each InfiniBand link provides 10 Gigabits of bandwidth.
- E. Cell-to-cell communication uses Reliable Datagram Sockets (RDS) over InfiniBand to achieve low latency.

Answer: B,C

Explanation:

C: Oracle Exadata is architected to scale-out to any level of performance. To achieve higher performance and greater storage capacity, additional database servers and Exadata cells are added to the configuration - e.g., Half Rack to Full Rack upgrade. As more Exadata cells are added to the configuration, storage capacity and I/O performance increases near linearly.
E: Oracle's interconnect protocol uses direct data placement (DMA - direct memory access) to ensure very low CPU overhead by directly moving data from the wire to database buffers with no extra data copies being made. The InfiniBand network has the flexibility of a LAN network, with the efficiency of a SAN.
Incorrect: Not A: The architecture of the Exadata solution includes components on the database server and in the Exadata cell. The software architecture for a Quarter Rack configuration is shown below.

Not B: No cell-to-cell communication is ever done or required in an Exadata configuration. Not D: Each InfiniBand link provides 40 Gigabits of bandwidth -
