050-742 Reliable Exam Pattern & Realistic Free PDF Quiz 2021 SUSE Certified Administrator in Systems Management (050-742) New Exam Discount

No matter how busy you are, you must reserve some time to study, **050-742 Reliable Exam Pattern** An SUSE SUSE Certified Administrator (SCA) in SUSE Manager tutorial will also serve you well when able to utilize open book or SUSE SUSE Certified Administrator (SCA) in SUSE Manager notes tests.

When you prepare for SUSE 050-742 certification exam, it is unfavorable to blindly study exam-related knowledge, All our 050-742 study materials are displayed orderly on the web page.

Your exam will be provided in the format of Questions & **050-742 Reliable Exam Pattern** Answers (Lagunamarine Testing Engine) so you can enjoy interactive exam experience, Fast Pass Certification Exam.

But when talking about the Certified Administrator in Systems Management (050-742) exam test, many people feel headache and don't know how to prepare for it, You can trust our 050-742 practice questions as well as us.

Our web backend is strong for our 050-742 study braindumps.

NEW QUESTION: 1

You need to create the contosodb1 database.

How should you complete the Azure PowerShell command? To answer, select the appropriate Azure PowerShell segments in the answer area.

Answer:

Explanation:

Explanation

Box 1: New-AzureRmSqlDatabase

New-AzureRmSqlDatabase creates a database or an elastic database.

New-AzureRmSqlDatabase is a command with the Azure Resource Manager (AzureRM) module. Azure Resource Manager enables you to work with the resources in your solution as a group.

Topic 3, SQL Server ReportingBackground

You manage a Microsoft SQL Server environment that includes the

following databases: DB1, DB2, Reporting.

The environment also includes SQL Reporting Services (SSRS) and SQL Server Analysis Services (SSAS).

All SSRS and SSAS servers use named instances. You configure a firewall rule for SSAS.

Databases

Database Name:

DB1

Notes:

This database was migrated from SQL Server 2012 to SQL Server 2016. Thousands of records are inserted into DB1 or updated each second. Inserts are made by many different external applications that your company's developers do not control. You observe that transaction log write latency is a bottleneck in performance. Because of the transient nature of all the data in this database, the business can tolerate some data loss in the event of a server shutdown.

Database Name:

DB2

Notes:

This database was migrated from SQL Server 2012 to SQL Server 2016. Thousands of records are updated or inserted per second. You observe that the WRITELOG wait type is the highest aggregated wait type. Most writes must have no tolerance for data loss in the event of a server shutdown. The business has identified certain write queries where data loss is tolerable in the event of a server shutdown.

Database Name:

Reporting

Notes:

You create a SQL Server-authenticated login named BIAppUser on the SQL Server instance to support users of the Reporting database. The BIAppUser login is not a member of the sysadmin role.

You plan to configure performance-monitoring alerts for this instance by using SQL Agent Alerts.

NEW QUESTION: 2

Use the following login credentials as needed:

Azure Username: xxxxx

Azure Password: xxxxx

The following information is for technical support purposes only:

Lab Instance: 10277521

You plan to create large data sets on db2.

You need to ensure that missing indexes are created automatically by Azure in db2. The solution must apply ONLY to db2.

To complete this task, sign in to the Azure portal.

Answer:

Explanation:

See the explanation below.

Explanation

1. To enable automatic tuning on Azure SQL Database logical server, navigate to the server in Azure portal and then select Automatic tuning in the menu.

2. Select database db2

3. Click the Apply button

Reference:

<https://docs.microsoft.com/en-us/azure/sql-database/sql-database-automatic-tuning-enable>

NEW QUESTION: 3

An organization has been running their website on several m2 Linux instances behind a Classic Load Balancer for more than two years. Traffic and utilization have been constant and predictable.

What should the organization do to reduce costs?

- A.** Change the Classic Load Balancer to an Application Load Balancer, and purchase Reserved Instances for the specific m2 instances.
- B.** Purchase Spot Instances for the specific m2 instances.
- C.** Change the m2 instances to equivalent m5 types, and purchase Reserved Instances for the specific m5 instances.
- D.** Purchase Reserved Instances for the specific m2 instances.

Answer: B
