NEW QUESTION: 1
You are configuring a budget plan to automatically spread.
Which allocation method should you use?
A. The Allocate across periods method
B. The Distribute allocation method
C. The Aggregate allocation method
D. The Allocate across dimensions method
Answer: A
Explanation:

Allocate across periods - The budget plan lines are allocated
from the source budget plan scenario across periods in
the destination scenario by using a period allocation key.
In the Master planning form, you can set up period allocation
keys to automatically explode sales orders in a period.
For example, a period allocation key can distribute an order of
1,000 units over 30 days with a period percentage of 25
percent per week.

B. If A antenna is 12dBi and B antenna is 14dBi, it can be said
that A is 2dBi smaller than B.
C. dBi and dBd: characterizing the relative value of the gain
D. dB: characterizing the relative value of power
Answer: A,C,D

NEW QUESTION: 3
Note: This question is part of a series of questions that
present the same scenario. Each question in the series contains
a unique solution that might meet the stated goals. Some
question sets might have more than one correct solution, while
others might not have a correct solution.
After you answer a question in this question, you will NOT be
able to return to it. As a result, these questions will not
appear in the review screen.
You are developing a website that will run as an Azure Web App.
Users will authenticate by using their Azure Active Directory
(Azure AD) credentials.
You plan to assign users one of the following permission levels
for the website: admin, normal, and reader. A user's Azure AD
group membership must be used to determine the permission
level. You need to configure authorization.
Solution:
* Create a new Azure AD application's manifest, set value of
the groupMembershipClaims option to All.
* In the website, use the value of the groups claim from the
JWI for the user to determine permissions.
Does the solution meet the goal?
A. No
B. Yes
Answer: B
Explanation:
To configure Manifest to include Group Claims in Auth Token
1. Go to Azure Active Directory to configure the Manifest.
Click on Azure Active Directory, and go to App registrations to

find your application:
2. Click on your application (or search for it if you have a lot of apps) and edit the Manifest by clicking on it.
3. Locate the "groupMembershipClaims" setting. Set its value to either "SecurityGroup" or "All". To help you decide which:
"SecurityGroup" - groups claim will contain the identifiers of all security groups of which the user is a member.
"All" - groups claim will contain the identifiers of all security groups and all distribution lists of which the user is a member Now your application will include group claims in your manifest and you can use this fact in your code.
